DIEBOLD CONTINUES TO EXPAND LOGICAL SECURITY CAPABILITIES

Leading security integrator adds Passlogix® partnership for single sign-on solution

NORTH CANTON, Ohio – In a marketplace where data drives business, the protection of an organization's information assets is more important than ever. That's why Diebold, Incorporated (NYSE: DBD), one of the world's leading security integrators, continues to expand not only its capabilities, but also its strategic partnerships to deliver holistic logical security solutions.

Diebold's approach to logical security is built on a managed services philosophy, which draws on the company's security expertise and several best-in-class strategic partners to create bundled solutions that address a wide range of logical security needs.

Diebold consults with its customers to identify a logical security strategy that will best protect their information assets, as well as integrate that strategy with existing physical security programs. In addition to delivering the hardware and software needed to execute the strategy, Diebold's logical security solutions include assessments to identify vulnerabilities (internal and external), compliance services, authentication [single sign-on (SSO) and password management] and network monitoring.

DIEBOLD CONTINUES TO EXPAND LOGICAL SECURITY CAPABILITIES/PAGE 2

“We are committed to establishing Diebold as an innovative and trusted end-to-end physical and logical security integrator and advisor,” said Dennis M. Moriarty, senior vice president, Diebold Security. “We believe our history in physical security, coupled with the continued expansion of our logical security expertise, uniquely positions Diebold as a valued business partner that can provide physical and logical security solutions from design to implementation.”

Diebold’s newest logical security offering pairs the company’s logical security expertise with enterprise SSO solutions from Passlogix[®], the developer of the v-Go Sign-On Platform, the market’s most robust, scalable and easy-to-deploy enterprise SSO platform. Sign-on tools are integral to identifying users when they need to access a network or system, authorizing access to individual applications and serving as the gatekeeper between users and everything they want to do on an organization’s network.

“As a security integrator, we encourage our customers to adopt a proactive, holistic security strategy that combines physical and logical security solutions to ensure protection of facilities, inventory, people and data,” said B. Scott Harroff, chief information security architect, Diebold Security. “The continued expansion of our capabilities and our knowledge base is integral to helping our customers develop and implement a comprehensive strategy that can mitigate ever-changing threats. SSO is a critical logical security tool that can save an organization time and money, enable regulatory compliance and enhance security throughout the enterprise.”

Enterprise SSO can help organizations reduce the number of application passwords that users must remember, automate the process of password entry and store user IDs and passwords for every application throughout the enterprise in a secure central repository that enables easier management and recoverability. Such solutions not only thwart hackers by strengthening and protecting passwords, they can also address the broader issue of “password overload.” This overload can lead to user frustration, productivity losses, security risks and administrative costs caused by the need for users to remember different passwords for various applications they require to do their jobs.

“SSO is just one of the many tools Diebold Security offers to help customers in all of the markets we serve protect sensitive information and the infrastructure on which it resides,” Harroff said. “Diebold can work with customers to reduce vulnerability by managing the complex task of developing and implementing a logical security strategy.”

DIEBOLD SECURITY CONTINUES TO EXPAND LOGICAL SECURITY CAPABILITIES/PAGE 3

Diebold Security delivers a holistic approach to logical security that enables customers to:

- Identify areas in an organization that are most vulnerable
- Assess and prioritize which real-world threats would have the most significant impact on an organization's critical information assets
- Deploy efficient solutions and mitigation strategies to protect assets
- Manage and monitor the overall maintenance of the logical security program
- Integrate, manage and monitor physical and logical security operations
