AMAG Technology Presents Symmetry™ Video

Torrance, CA, September 25, 2006 – AMAG Technology, a G4Tec Company, presents Symmetry™ Video, a powerful video solution that seamlessly integrates with the Symmetry™ Professional Security Management System to provide a synergistic security management solution. Symmetry Video's open platform supports multiple technologies which allow users to migrate from analog to digital technology at their own pace. Symmetry Video seamlessly integrates with intrusion, access control, and numerous other security and building functions.

Symmetry Video Management software records live video. Security administrators can view up to 36 concurrent cameras per client PC. Display several screens on one monitor to view live, recorded or archived images simultaneously. The security administrator can record at his/her command to be sure not to miss an event.

Optimize your IT network infrastructure with Symmetry ENVSTM (Edge Network Video Server). Symmetry ENVSTM's powerful store and forward solution lets you store data at the edge of the LAN/WAN. Forward data when you choose, keeping data and network integrity intact. Archive data at a convenient time, reducing network stress.

AMAG's Symmetry multiNODE intelligent controllers combine enhanced access control with MPEG-4 video IP compression technology to optimize video quality and network utilization. Symmetry Video and Symmetry Security Management are tightly integrated for event based recording or trigger based commands.

"The Symmetry ENVSTM coupled with the Symmetry Video Management software module provides another progressive security management alternative to AMAG customers who need a video solution deeply integrated with their access control system," said AMAG President, Bob Sawyer.

The Symmetry Video Solution provides:

- Highly functional Virtual Matrix for displaying live, recorded, and archived video.
- Integration with Symmetry ENVSTM (Edge Network Video Servers), IP cameras and market leading, third party Digital Video Recorders in a single solution.
- Incorporate video into the same interactive maps and alarm screens as access control and intrusion devices.
- Video verification with door control allows operators to monitor and control door activity.
- Supports advanced CCTV functionality.
- Event based recording saves hard drive space and network bandwidth.
- Set cameras to record video immediately prior and after alarm events.
- Pop-up video on alarm allows operators to view activity immediately.
- Tour facility allows operators to view the entire premises.

The Symmetry ENV5 provides one or four channels of video and frame rates of up to 30 frames per second depending on the model and configuration. It is controlled by the AMAG Symmetry Video software which also integrates IP cameras, HTML web cams, and supports all of AMAG's previously integrated DVR partners. The continued growth and support of AMAG's DVR Partner Program is in keeping with AMAG's goal of providing flexibility and choice to meet its customer's unique needs.

For more information about AMAG Technology's Symmetry Video solution call 800-316-7465 or visit www.amag.com.

About AMAG Technology

AMAG Technology Symmetry Security Management Solutions can be found in a wide spectrum of markets: government, commercial, education, transportation, healthcare, retail and banking. Based out of Torrance, California with sales and support located throughout the US, AMAG sells its products through its valued resellers throughout North America. AMAG Technology is part of G4Tec, a leading manufacturer of scalable, integrated security management systems headquartered in Tewkesbury, Gloucestershire, England. AMAG Technology has been at the leading edge of access control technology for over 30 years. As AMAG Technology looks to the future, the next generation of products will bring the core aspects of security to the next step beyond integrated solutions – Symmetry™.
