ELMO USA'S NEW P100 DOCUMENT CAMERA FOR GOVERNMENT, SECURITY AND LAW ENFORCEMENT COMMUNICATIONS

Dynamic Presentations Help With Both Internal and Public Communications

PLAINVIEW, NY -- ELMO USA's new, feature rich P100 document camera addresses the complex and wide-ranging needs of government, security and law enforcement agencies. With state-of-the-art 30-frame-per-second capability and ultra-high resolution at an attractive price, this compact and lightweight document camera is the ultimate visual presentation tool both for internal uses—such as briefings and training—and also for communicating with the media or general public, such as in press conferences, public meetings and seminars.

“The P100 document camera has set a new standard for visual communications technology,” said Howard Winch, ELMO USA Vice President of Sales. “Because of its cutting-edge technology and unique features, The P100 enhances presentations by helping law enforcement and security agencies and government officials communicate information that is often complex. It also enhances meeting interaction, comprehension, retention and overall effectiveness.”

The P100's meets and exceeds a myriad of today's government and law enforcement communication technology challenges, including:

- Need for higher resolution (the P100 is High Definition TV-ready).
- Sleeker and more compact design.
- Presentation control via an LCD monitor.
- Compatibility with PC applications and other media.
- Adaptability, flexibility and ease of use.

The P100 gives more image power and clarity through an advanced 64x zoom document camera (16x optical zoom and 4x digital zoom) and 1.3 million pixels from a CMOS image sensor for ultra-high resolution and flawless image quality. A flexible arm broadens the camera's reach to project three-dimensional objects and highly detailed, special materials of almost any kind—without any fuss or hassle.

In addition, the P100 is intuitive and provides users with quick setup and easy operation. The flexible arm design permits one finger set-up of the unit, making the P100 compliant with Federal Americans with Disabilities Act (ADA) requirements. The P100 also folds up for safe and efficient transport and storage. All frequently used controls such as zoom, one-push auto focus and input selection are conveniently located at the user's right hand for uninterrupted flow. A built-in, 3.5-inch LCD monitor allows the presenter to view the information while continuing to face the audience.

The P100 is compatible with PC/MAC applications and other media. USB 2.0 also permits the P100 to be used in conjunction with a Smart Board™ display medium or other interactive whiteboards. A Secure Digital (SD) storage media card slot allows users to conveniently plug in and access stored information without having to utilize a laptop computer to make a presentation. Based on its memory capability, an SD card (sold separately) can store more than 2000 images for display through the P100 document camera.

The P100 also accommodates HDTV as it complies with the diversifying high-image quality of output devices. With its HDTV output of 1280 x 720 pixels, the display does not become oblong, even with 16:9 high-definition monitors. The P100 also supports progressive scans so flickering and blurring does not occur on the screen.

A green friendly product, the P100 complies with all applicable Restriction on the use of Hazardous Substances (RoHS) directive 2002/95/EC regulations.

ELMO USA has been an innovator in the manufacturing and distribution of electronic and optical products for more than 80 years. The company continues to lead its industry with cutting-edge technologies that shape the future of security and visual communications.
