

FOR IMMEDIATE RELEASES

New STOPware™ Kiosk Provides One-Stop Self-Service Security.

Self-Registration Solution for Visitor Management Demonstrated at ISC West 2009.

Las Vegas, NV (April 1, 2009) – STOPware™, Inc., the industry leader in visitor management solutions, is exhibiting their ready-made kiosk application solution at ISC West this week. On display is their PassagePoint® Global v10 Visitor Management Solution integrated with an innovative Meridian Kiosk design. The secure kiosks provide a visitor self-registration solution that is optimized for busy lobbies with high traffic or unsupervised/unstaffed lobbies, using STOPware's PassagePoint® technology.

“PassagePoint’s power and convenience lets users tailor the registration process to meet their needs,” said Paul Terschuren, VP Sales and Marketing, STOPware Inc.

“Using the PassagePoint Kiosk can help control the visitors allowed into a facility without the need to allocate personnel to this application – improving guard productivity and service, enhancing company image and making a facility more secure.”

The PassagePoint Kiosks guide visitors through the sign-in process, finding their host, scanning their driver license, business card, visitor e-pass or entering their name and company. A photo is taken with the built in camera and the system generates a professional visitor badge, all within seconds. PassagePoint's streamlined registration process can ensure that the visitor is not on a list of barred persons and notify management that the visitor has arrived. The Self Registration solution is an efficient way to manage unmanned lobbies, quickly process approved visitors and reduce workflow at the front desk.

PassagePoint is used worldwide by the U.S. Government and many Fortune 500 companies in addition to smaller organizations. PassagePoint Global v10, STOPware's latest and most comprehensive enterprise-level visitor management solution, offers centralized control over large integrated systems, with integrated security, communications, badging, multi-language support, and advanced reporting. Visitor management can be implemented globally or locally, with the ability to customize screens and lists. PassagePoint Global v10 also offers integration with IT infrastructure plus the capability to create a directory of hosts and link to active directory to leverage Single Sign-On capabilities. The software also integrates with Microsoft Outlook calendars functionality and is compatible with most major access control manufacturers.

Meridian Kiosks, a reseller of the STOPware software, manufactures the kiosks and integrates the components. Their kiosk options range from indoor freestanding to wall mounted and outdoor solutions. With quality as their top priority, Meridian Kiosks is the only top-tier self-service provider that has complete metal fabrication in house.
