RS2 Technologies Partners with RTS Sentry

Munster, IN - RS2 Technologies, LLC has announced that it has teamed with RTS Sentry, Inc. to provide access control systems that integrate RS2's feature-rich **Access It**[®] line of access control software with RTS' unique hybrid (analog/IP-addressable) video surveillance camera technology. Most recently, RS2 and RTS partnered on a major installation at one of the Midwest's largest utilities in St. Louis, MO.

RS2 National Sales Manager Gary Staley stated that "We are very excited about our relationship with RTS Sentry. The pairing of our cutting-edge software with RTS' advanced video recording, encoding/decoding, and transmission technology is a powerful combination for customers who need sophisticated, enterprise-class surveillance and access control solutions."

According to RTS Sentry General Manager Tony Vrooman, "We chose RS2's access control products for this utility application for a number of reasons. Foremost among these is the robust nature of their software compared to other software products available in the market. Secondly, we like the fact that the products are backed up by a very, very strong technical team. Finally, we feel that, with RS2 products, we're getting the most cost-effective enterprise solution in the market. Their products give us a lot more features, such as interactive mapping, at a lower cost."

About RTS Sentry, Inc.

RTS Sentry, a division of Compu-Type Computer Services, offers professional surveillance strategies at an affordable price. RTS offers a variety of services, including surveillance consultation, complete system installation and surveillance site architecture design.
