

## **PremiSys™ From IDenticard Systems Provides Feature-Rich Access Control With Badgemaking Capabilities.**

Las Vegas, NV (April 1, 2009) – The new PremiSys™ Access Control System from IDenticard Systems provides advanced features and versatility for facilities of any size, from a small office building to a complex network of facilities. PremiSys also incorporates IDenticard's expressionsID® card design and badge making system along with IP addressable hardware and customizable user roles.

PremiSys features include dynamic mapping capability that enables monitoring of alarms, relays, and doors through a floor plan/graphic map interface. An anti-passback feature prevents the reuse of a card to access the same area within a specified period of time, or until the card is used to exit the area. Anti-passback also incorporates occupancy limits to control the number of cardholders who enter an area. ADA compliance extends door time for cardholders with disabilities.

Designed by IDenticard's experienced team of security technicians, PremiSys employs a hardware platform that incorporates Windows standard controls, thus enabling operators to learn the system quickly. PremiSys is also compatible with multiple access

control readers including biometric, proximity card, smart card, magnetic stripe and bar code devices. A Start-Up Kit facilitates system customization.

IDenticard's expressionsID best-in-breed badging solution – which is built into the PremiSys Access Control System – offers ready-to-use card designs that can be modified using drag-and-drop controls. Badges can also be easily printed directly from the data entry screen.

“Today's sophisticated technology vastly expands the capabilities of the latest version of our PremiSys access control system,” said Aaron Henderson, Manager, Product Development, IDenticard Systems. “But sophisticated technology doesn't need to translate into a complicated system. In fact, PremiSys is simple to use and intuitive for first-time users. Its flexibility makes it perfect for a wide range of application parameters, and best of all, it's supported by our team of engineers and experienced technical staff.”

PremiSys is part of IDenticard's comprehensive line of integrated security products on display at ISC West, including customer ID cards and badge accessories, ID badge software, access control, smart cards and biometric solutions, and visitor management programs.

**About IDenticard:**

IDenticard is a market leader in personal identification, access control and consumable identification badges. Known as an innovator in security card technology, its products include identification card systems that combine biometrics, digital imaging and other technologies to positively identify people and prevent identification card counterfeiting; and access control systems that restrict entry into buildings using multiple card-reader technologies. IDenticard offers a wide range of choices in custom-printed security ID cards that include special applications designed to protect against unauthorized alteration or copying.
