

BUILDING INTENTIONAL SECURITY

with Informed Risk Strategies™

80% of security professionals stated that “...security risks [are] either not known or only partially assessed.”*

If you can't explain security risks to your business leaders, who will?

Intentional Security™

Intentional — Purposeful. Deliberate. Planned.
That's what security should be.

Executives are tired of security based on guesswork.
Security professionals are tired of fire-fighting.

Closing the gap between business leaders and security practitioners is what intentional security is all about.

Encurve helps clients build intentional security utilizing our proprietary methodologies and experienced, board-certified security professionals.

Security with a Difference

All security providers are not created equally. Encurve is an independent, international, business risk consultancy with experience that goes beyond our competition. We didn't learn security from books or by attending conferences – we learned it in the real-world protecting organizations and investigating security incidents.

All of our services are based on four guiding principles:

Alignment of security with business objectives

The single biggest problem in the security profession is the inability to align security strategy and operations with the business;

Convergence of security strategies

Traditional models of separate security functions are wasteful and hinder management of cross-functional risk;

Risk-based decision making

Founded on an informed, *data driven* understanding of the unique threats and risks to each organization; and,

Strategic focus

Transforming the security organization from tactical and fire-fighting to strategic and proactive.

Informed Risk Strategies™

We use our expertise to listen to *your* requirements and solve *your* problems using *informed* risk strategies – we never sell you a prepackaged service delivered by inexperienced consultants with a checklist and canned report.

Security, Risk and Threat Assessments

We offer a complete range of physical and IT assessments that go beyond technology to address policy, process, regulatory, and organizational issues. We utilize our proprietary methodologies in every assessment to tailor deliverables to your requirements and not just report a list of vulnerabilities. We identify the root causes of problems and provide both detailed and executive level reports – each with the information you need to make informed risk decisions.

Policy Development

Effective policies are much more than documents sitting on a shelf. They are the foundation of a successful security program. We build policy frameworks to improve operational performance and create measurable compliance.

Implementation – Real Converged Security

From designing surveillance systems to wireless network security architectures we have the expertise to provide real-world designs, project management or implementation support. We don't pay lip service to convergence, we live it.

Incident Response Planning & Support

Incident response plans, evidence collection and analysis, legal issues, interviewing or crisis communications – incident response and investigation is so much more than monitoring alarms or digital forensics. Whether you're in a crisis now or require a more proactive, responsive and cost-effective incident response program, we can help.

These are just a few of the ways Encurve can help you. Contact us today to learn how you can create *intentional security*™ in your organization:
