NOTIFIER LAUNCHES WEB SERVER FOR EASY ACCESS TO FIRE ALARM CONTROL PANELS

NORTHFORD, Conn. – Honeywell Automation & Control Solutions' NOTIFIER division introduces its new NOTI●FIRE●NET™ (NFN) Web Server, a web-based service designed to offer facility managers remote access to their NOTI●FIRE●NET network of fire alarm control panels. Via the Internet or an Intranet, facility managers can now conveniently access information on their panels directly from their computers.

Dave Tamulevich, Network Product Manager states, “With the NFN Web Server, operators can cross-examine systems, on or off-site. This added convenience and accessibility allows them to obtain and analyze data needed to make sound decisions in the event of a trouble condition or alarm.”

Operators simply link to the Internet using a secure password and user access record, and immediately get connected to a network of NOTIFIER fire alarm panels or a single fire alarm control panel with a network module. The NFN Web Server provides a “snapshot” of the data on the entire NOTI●FIRE●NET network. With its user-friendly graphical interface, operators can easily view the event history of a fire alarm control panel and track a system’s status, device properties, and other information. The NFN Web Server serves as a valuable tool for monitoring multiple fire control panels from one main source.
