

FOR IMMEDIATE RELEASE

Weather Shield Now Available For Kaba Products

Winston-Salem, NC (March 15, 2007)

Kaba Access Control now offers a weather shield designed with a spring loaded face plate that provides protection against weather and accidental damage, while still allowing easy access to the lock. The weather shield is a perfect solution for all applications where rain, snow, wind and other harsh elements may impair one's ability to use the lock.

The weather shield is molded from thick smoke colored polycarbonate material that can withstand temperatures ranging from -40°F to 120°F (-40°C to 49°C). Inexpensive and highly durable, the weather shield installs easily using five surface mounted screws that are supplied.

Designed for the Simplex / E-Plex 5000 Series, the weather guard will also work on many of Kaba's other products, including: Simplex 1000, Simplex L1000, Simplex 8100, Simplex EE1000 and the E-Plex 2000.
